C•(SYSTEM) ULTI-MAX™ — NEW

With its Rough Buff Finish, the C•(System) ulti-max skids effortlessly through the front, saving axis rotation in the mid-lane to grab the backend for strong continuous response to friction that cuts easily through the pins on medium to medium-oily lane conditions.

60-105383

DUAL FLIP I-BLOCK CORE

This core incorporates a top and bottom flip block over a centered mass. The dual flip blocks keep the core revving to the backend for improved pin action.

C•(SYSTEM) ALPHA-MAX™

The C•(System) alpha-max offers the highest hook potential of any Brunswick ball to date. It skids effortlessly through the front, saving axis rotation in the mid-lane to grab the backend for strong response to friction and cuts easily through the pins.

60-105344

ASYMMETRIC I-BLOCK CORE

This core enhances the CFT alpha-max coverstock to create maximum forgiveness, strong entry angles along with versatile drilling layouts.

WICKED SIEGE™

The Wicked Siege combines the Propel X Pearl coverstock and the MACE medium RG core to produce a ball motion that is clean through the front, consistent in the mid-lane with a quick response to friction on the backend.

60-105332

MACE™ CORE

This core has a medium RG core system for a breakpoint further down lane. A high RG differential to increase backend traction and high RG asymmetric differential to quicken the response time to friction.

LETHAL REVOLVER™ — NEW

With its 2000 Siaair Micro Pad finish, the Lethal Revolver unites the proven Propel X Solid coverstock and the Jack low RG core to produce a ball motion that clears the front part of the lane and produces a strong yet predictable ball motion from the breakpoint through the pins especially for bowlers with lower rev rates.

60-105385

JACK™ CORE

The Jack core was designed as a low RG symmetric core with a high differential. The low RG engages in the mid-lane assisting in ball motion, and the high differential increases track flare potential giving the ball more opportunity to grip the backend while using standard layouts.

LOADED REVOLVER™

With its Rough Buff finish, the Loaded Revolver unites the proven Propel X Pearl coverstock and the Jack low RG core to produce a ball motion that clears the front with ease and is aggressive in the mid-lane with a quick, continuous response to friction on the backend.

60-105342

JACK CORE

The low RG engages in the mid-lane assisting in ball motion, and the high differential increases track flare potential giving the ball more opportunity to grip the backend while using standard layouts.

REVOLVER™

The Revolver, with its reformulated ConneXion Grip coverstock and 4,000 Siaair Micro Pad finish, provides good length with a strong continuous backend reaction that matches up on medium to oily lane conditions, providing accuracy for a range of bowling styles.

60-105312

JACK CORE

The low RG engages in the mid-lane assisting in ball motion, and the high differential increases track flare potential giving the ball more opportunity to grip the backend while using standard layouts.

MASSIVE DAMAGE™ - NEW

With its Rough Buff finish, the Massive Damage will rev quickly in the mid-lane with a strong continuous backend reaction that matches up on medium oil lane conditions for a wide range of bowling styles.

60-105381

LOW RG CORE

The Massive Damage features a new Low RG Performance core that revs quickly providing mid-lane control with a strong predictable backend motion.

DAMAGE™

With its high gloss finish, the Damage provides excellent length with a quick response to friction at the breakpoint. With the highest rated breakpoint shape, at the Advanced Performance price point, Damage matches up on medium to dry lane conditions for a wide range of bowling styles.

60-105334

HIGH RG PERFORMANCE CORE

The Damage incorporates a new High RG performance core that provides easy length through the heads and mid-lane while maintaining axis rotation for a strong continuous backend motion.

- Massive Damage

KARMA™ BLACK/BLUE SOLID — NEW

With its High Gloss box finish, the Karma Black / Blue Solid will provide good length through the heads, a medium response to friction in the mid lane with a smooth controllable backend. The Karma Black / Blue Solid is great ball for rev dominant and slower ball speed players on medium to light oil conditions.

60-105337

MEDIUM RG PERFORMANCE CORE

The Karma Black / Blue Solid incorporates a familiar light bulb shape Medium RG Performance core that provides easy length through the heads, mid-lane stability while maintaining axis rotation for a strong continuous backend motion.

KARMA™ BLUE/GREEN PEARL - NEW

With its High Gloss box finish, the Karma Blue/Green Pearl will provide excellent length with a medium to quick response to friction at the breakpoint. The Karma Blue/Green Pearl is great ball for rev dominant and slower ball speed players on light oil conditions.

60-105335

MEDIUM RG PERFORMANCE CORE

Incorporating a familiar light bulb shape this core provides easy length through the heads, mid-lane stability while maintaining axis rotation for a strong continuous backend motion.

AVALANCHE™ URETHANE

Designed for extra length and a smooth predictable ball motion the Avalanche Urethane is ideal for lighter amounts of oil and a more "down the boards" line to the pocket. The extra length and predictable ball motion will keep you on top of your game.

60-105308

TEAL RHINO™ LIGHT BULB CORE

This core and its Danger Zone® modification were at the heart of two of the most successful balls of all time.

SLINGSHOT[®] — NEW COLORS

The Slingshot features the popular Brunswick PowrKoil 17[™] Reactive coverstock. PowrKoil 17 is a mild reactive coverstock that will create length with a medium response to friction on dry to medium-dry lane conditions. The Slingshot is available in a variety of bright pearlized colors to match any bowler's style.

2-PIECE SHAPED CORE

The first ball in its class with a two-piece shaped dynamic core that offers multiple drilling options and stronger hitting power compared to traditional three-piece pancake weight-block cores available at this price point.

Hook Potential: Rated on an open-ended scale, hook potential describes the relative "out of the box" hook potentials of Brunswick bowling balls. Balls with higher numbers will tend to hook more. Balls with lower numbers will tend to hook less. Bowling balls do not hook by themselves but respond to the forces a bowler applies at release. Hook potential numbers are not a numerical measurement of hooking action. Don't use the difference in hook potential numbers to try to predict the exact difference in the total amount of hook between two balls. A value of 100 is approximately equal to a strong Reactive coverstock - "Danger Zone type" ball reaction. Balls with hook potential numbers greater than 100, typically Particle coverstocks, will tend to hook more than balls with strong Reactive coverstocks. Balls with hook potential numbers less than 100 will tend to hook less than balls with strong Reactive coverstocks.

Length: Rated on an open-ended scale, length describes the relative "out of the box" length of Brunswick bowling balls. Balls with higher numbers will tend to go longer before starting to change direction. Balls with lower numbers will begin to change direction earlier. Length numbers are not a numerical measurement of length. Don't use the difference in length numbers to try to predict the exact distance between breakpoints. A value of 100 is approximately equal to a strong Reactive coverstock - "Danger Zone type" length. Balls with numbers greater than 100 will tend to go longer than a strong Reactive ball. Balls with numbers less than 100, typically Particle coverstocks, will tend to go earlier than a strong Reactive ball.

Typical Breakpoint Shape: Rated on an open-ended scale, Typical Breakpoint Shape describes the relative "out of the box" breakpoint shapes when the balls are used on lane conditions that are appropriate for that ball. For example, on medium amounts of oil, Reactive coverstock balls will tend to have a sharper breakpoint than Particle balls. If the amount of oil is significantly increased, the Reactive ball may not break on the backend at all and the Particle ball may have the sharper breakpoint. The breakpoint numbers don't guarantee a specific breakpoint shape, but indicate the typical breakpoint shape when used on appropriate lane conditions.

PRO SHOP GOODS

Brunswick carries quality bowling products at exceptional savings.

Siaair Micro Finishing Pads

Siaair is a micro finish abrasive pad with three components, one perfect result. Siaair combines the revolutionary velvet net-backed abrasive with a pressure-equalizing, special foam cushioning and the proven Siafast fastening system. The combination is a three-dimensional abrasive for the highest quality requirements in finishing.

Benefits Include:

- Longest lasting micro pad in the industry
- Consistent finish throughout life of pad
- Minimum clogging
- Low scratch depth
- Waterproof and washable
- Available in the following grits – 240, 360, 500, 800, 1000, 1500, 2000 & 4000

Siaair Micro Pads use an aluminum oxide abrasive. As the sanding continues it fractures and creates sharp surfaces. The A/O grain does not penetrate the surface as deeply so it does not produce scratches that are hard to remove.

The **competition** uses a silicon carbide abrasive which is very sharp, brittle and hard. This causes the product to die off quickly becoming less sharp each time the grain fractures.
